Professional Summary

Full Stack Software Engineer with 3+ years of experience building large-scale web applications using .NET Framework, .NET Core, Angular, and SQL Server. Proven expertise in developing RESTful APIs, event-driven architectures with Azure cloud services, and optimizing database performance. Strong foundation in software design principles, SOLID patterns, and modern development practices with hands-on experience in CI/CD pipelines and production support.

Technical Skills

- **Backend:** .NET Core, ASP.NET MVC, ASP.NET Web APIs, C#, RESTful Services, SOAP
- **Frontend:** Angular (v17), Ionic Framework, TypeScript, JavaScript, HTML5, CSS3
- **Databases:** MS SQL Server, MySQL, Azure SQL Database, T-SQL, Entity Framework
- **State Mgmt:** RxJS, NgRx, Angular Material, Reactive Forms
- **Cloud & DevOps:** Azure Functions, Azure Monitor, Azure Log Analytics, Azure DevOps
- **Data & Reports:** Power BI, Tableau, Excel, SSMS, Business Intelligence Dashboards
- **Practices:** OOP, Design Patterns, Component-Based Architecture, Agile/SCRUM
- **Tools:** Git, Visual Studio, VS Code, Postman, Azure DevOps
- **Competencies:** API Integration, Authentication (JWT), Unit Testing, Debugging, Performance Tuning
- **Languages:** English (Fluent), Telugu (Native)

Professional Experience

CodeLine Tech

Senior Software Engineer

Hyderabad, Telangana, India

May 2025 – June 2026

- Architected and developed scalable .NET Core APIs for Trading and Order Management Systems handling real-time data processing and high-volume transaction workflows
- Designed and implemented event-driven architectures using Azure Functions, Service Bus queues, and webhooks for asynchronous trading signal processing and order execution
- Built responsive Angular applications with TypeScript for real-time trading dashboards and order management interfaces
- Optimized SQL Server database schemas and complex T-SQL queries, reducing query execution time by implementing proper indexing strategies and stored procedures
- Established CI/CD pipelines in Azure DevOps for automated builds, testing, and deployments across multiple environments
- Provided production support with 99.9% uptime, troubleshooting critical issues in live trading systems and implementing robust error handling mechanisms
- Applied SOLID principles and design patterns including Repository, Factory, and Singleton patterns to ensure maintainable and testable code

Key Project: Rule Engine — Algorithmic Trading Platform .NET 9, SQL Server, SignalR, Alice Blue API

- Built a production-grade multi-tenant algorithmic trading engine (AlgoDesk Pro) for Indian equity and derivatives markets (NSE/NFO/MCX) using .NET 9 worker services and System.Threading.Channels for high-throughput tick processing
- Designed a generic JSON-driven strategy engine where any trading strategy (entry/exit rules, stop-loss, take-profit, re-entry, trailing stops) is fully configured via database with zero code changes
- Implemented NiftyOptions Strategy — a multi-leg NIFTY options strategy supporting ATM/OTM/ITM strike selection, weekly/monthly expiry, per-leg risk management, and automatic square-off; bootstrapped option chain from approximately 37,000 NFO contracts via Alice Blue public CSV master
- Engineered tick pipeline: Alice Blue WebSocket feeds into bounded Channel, processed by multi-reader StrategyEngine worker pool, routed to OrderHandlerService for REST order placement with retry logic
- Built SignalR real-time dashboard (MarketHub) for live P&L, trade signals, and order status; implemented hot-reload DLL system enabling zero-downtime strategy deployment

HealthOnUS Technologies PVT LTD

Associate Software Engineer

Hyderabad, Telangana, India

January 2023 – May 2025

- Developed full-stack healthcare platform features using ASP.NET Core Web APIs and Angular, supporting post-surgical care, critical care, lab tests, and pharmacy delivery services
- Designed normalized SQL Server database schemas with tables, stored procedures, views, and functions following best practices for data integrity and performance
- Built RESTful APIs with proper authentication and authorization for secure integration with frontend and third-party healthcare systems
- Implemented comprehensive unit tests and integration tests using xUnit and Moq frameworks, achieving 85% code coverage
- Managed database deployments and schema migrations across development, QA, training, and production environments using versioned migration scripts
- Performed SQL query optimization and database performance tuning, improving average API response times by 40%
- Collaborated with cross-functional teams in Agile/SCRUM environment, participating in sprint planning, daily standups, and retrospectives

Key Achievements & Projects

- Delivered end-to-end features for Trading OMS including signal generation, order routing, and execution workflows with zero data loss
- Implemented automated database deployment pipeline reducing deployment time from 2 hours to 15 minutes
- Successfully resolved 100+ production incidents with average resolution time under 2 hours
- Designed microservices architecture for healthcare platform serving 10,000+ daily active users

Education

Anil Neerukonda Institute of Technology & Sciences

Bachelor of Technology in Electronics and Communication Engineering, CGPA: 7.5/10 2019 – 2023

Visakhapatnam, India

Sree Bharathi Junior College

Intermediate (MPC), GPA: 9.8/10

Eluru, India

2017 – 2019
